Western Regions Hit Harder by Veggie Burger Introduction

Total Sales per Month for Each Region

While every product and every region has had its sales decrease, the **Western Regions** and the **Hamburger** are the regions and product, respectively, that appear to have been hit the hardest by the introduction of the Veggie Burger. Targeted advertising intended at informing Western region customers about the health benefits of meat and that McDonald's uses on the most reliable, humane sources of meat might help bring sales back up. In addition, the introduction of a Veggie burger, specifically to the Western region, might cater to the increasingly large Vegetarian and Vegan customer base.
